

## ASD Prestige Bronze, Brass - Doors and Windows.

### The Contemporary Luxury of Traditional Metals

- Superb aesthetics
- High thermal insulation
- Weather rated 1050 Pa
- High strength and durability
- High corrosion resistance even in marine environments
- 100% re-cycable

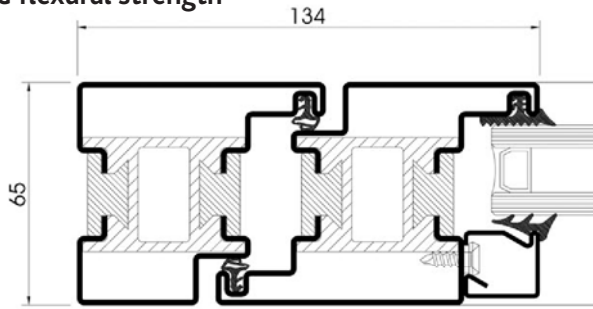

**ASD Prestige Bronze, Brass - Doors and Windows.**

**Insulation Technology**

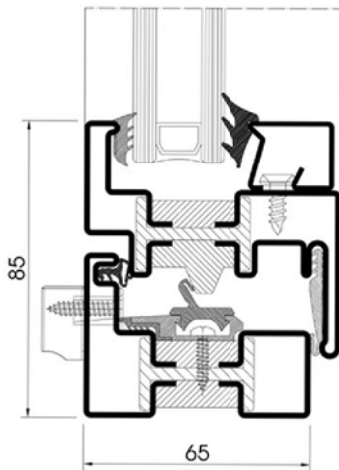

The thermal break is created by bonding the inner and outer profile together with a fibreglass reinforced polyamide extrusion, then high density polyurethane resin is injected under high pressure to firmly unite the two metal parts. This technology ensures continuous connection and consequent insulation with no gap in the seal. It also guarantees maximum torsional and flexural strength

Non insulated profile in brass. Various level of polished finish available.

Window profiles are narrow yet strong for maximum light and style.

Door profiles are slin in apperance yet robust enough for heavy commercial applications.

**Joining profiles**

Profiles can be joined by either of two methods. Firstly they can be welded, and the surface treated after manufacture in the traditional way. Secondly they can be cleat jointed with robust stainless steel cleat inserts.

Tested to EC certification standard EN14351-1 by European Certification laboratories
